The coffee tree has smooth, ovate leaves and clusters of fragrant white flowers that mature into deep red fruits about 1/2 inch. The fruit usually contains two seeds, the coffee beans. Arabica Coffee yields the highest-quality beans and provides the bulk of the world's coffee, including 80% of the coffee imported into the United States. The species is thought to be native to Ethiopia, where it was known before 1000. Coffee's earliest human use may have been as a food; a ball of the crushed fruit molded with fat was a day's ration for certain African nomads. Later, wine was made from the fermented husks and pulps. Coffee was known in 15th-century Arabia; from there it spread to Egypt and Turkey, overcoming religious and political opposition to become popular among Arabs. At first proscribed by Italian churchmen as a heathen's drink, it was approved by Pope Clement VIII, and by the mid-17th century coffee had reached most of Europe. Introduced in North America in 1668, coffee became a favorite American beverage after the Boston Tea Party made tea unfashionable.

- ① Coffee tree has white flowers that grow into deep red fruits.
② Most of the world's coffee is believed to originate from Ethiopia.
③ Coffee was popular in America after the Boston Tea Party.
④ Coffee was considered to be profane by Pope Clement VIII.

However, the concept of a rational action also incorporates the concept of a reason, and reasons need not be egocentric.

The concept of a rational action can be seen to be quite complex: it is a hybrid concept. A rational action is one that is not irrational. Any action that is not irrational counts as rational; that is, any action that does not have (is not believed to have) harmful consequences for you or those for whom you care is rational. (㉠) So rationality does involve, if only indirectly, the egocentric character of an irrational action. (㉡) The fact (belief) that anyone will benefit from your actions is a reason. (㉢) Reasons are not limited to facts (beliefs) about benefits to you or those for whom you care. (㉣) Thus an action that has (is believed to have) harmful consequences for you can be rational if (you believe) there are compensating benefits for others, even if you do not care about them.

- ① ㉠ ② ㉡ ③ ㉢ ④ ㉣

One of the greatest paradoxes we wrestle with is our own dark or shadow sides.

- ㉠ Storms always pass. Just as there has never been a day that did not give way to night or a storm that lasted forever, we move back and forth on the pendulum of life. We experience the good and the bad, the day and the night, the yin and the yang.
- ㉡ This balancing act is difficult, but it is a part of life. If we can see this as an experience as natural as night following day, we will find more contentment than if we try to pretend that night will never come. Life has storms.
- ㉢ We often try to get rid of them, but the belief that we can banish "dark sides" is unrealistic and inauthentic. We need to find a balance between our own opposing forces.

16. 다음 글의 주제로 가장 적절한 것은?

Deforestation can destroy natural habitats for millions of species. To illustrate, seventy percent of Earth's land animals and plants live in forests, and many cannot survive the deforestation. Deforestation also deprives the forest of its canopy that blocks the sun's rays during the day and holds in heat at night. This disruption leads to more extreme temperature swing that can be harmful to plants and animals. Furthermore, trees help maintain the water cycle by returning water back into the atmosphere. Without trees to fill these roles, many former forest lands can quickly become deserts.

- ① The process of deforestation by desertification
- ② Efforts to prevent deforestation around the world
- ③ Negative effects of deforestation on the environment
- ④ A bitter controversy over forest development

17. 다음 글의 밑줄 친 부분에 들어갈 내용으로 가장 적절한 것은?

When an argument is inevitable, it is important to avoid putting others on the defensive. Statements that use _____ are effective to this end. For instance, if a colleague is not contributing enough to a project, instead of saying, "You aren't helping enough," try, "I feel stressed from all this work." This sounds less accusatory, so it avoids making the other person defensive. The less people have their back up against the wall, the better the chance they will be open to dialogue about problems.

- ① "we" instead of "I" ② "I" instead of "you"
- ③ "you" instead of "I" ④ "I" instead of "we"

One of Raoul Francé's most surprising claims was that plants are capable of _____. They try their best to get what they want and to avoid what they do not want. Some plants defend themselves against ants that steal their nectar. They will close their flowers when the ants are nearby; the flowers will open only when there is enough dew on the stems to prevent the ants from climbing up. Some kinds of acacia are even capable of making a deal; they reward certain types of ants with nectar in return for warding off other insects.

- ① intent ② tension ③ firmness ④ consistency

Like our electronics' reliance on cloud storage, many companies are turning to crowdsourcing to solve complex problems. In this fluid staffing model, project teams come together like flash mobs of talent. They assemble, learn, contribute, and then disband. This model of work demands heightened levels of collaboration and learning. To contribute, individuals must swiftly ramp up their understanding of the situation, the problem, the players, the options, etc. They must then learn how to quickly assemble expertise, without the benefit of long-term relationships. When the flash of collective brilliance ends, they must let go and move on to the next rapid-learning, rapid-contribution cycle. Business strategist Jennifer Serfl has observed, "Our role as conduit is more vital than our role as source in this knowledge economy." Much like I found with my research for the book *Multipliers*, the critical skill of this century is not what you hold in your head, but your ability to tap into and access what other people know.

The best leaders and the fastest learners know how to _____.

- ① make effective strategies coping with social changes
 - ② harness collective intelligence
 - ③ interpret relationships between collaboration and expertise
 - ④ protect knowledge and information

Vicious crimes can contribute to a sense of anxiety among citizens who feel defenseless against the perpetrators. Continued concern over public protection has triggered recurring discussions about violence in media, political and social arenas, and the proliferation of a plentitude of theories about the cause of violence, which attribute it variously to war, drug addiction, class or race frustrations, even suggesting that it is inherently present in cultural identity. As part of an effort to understand the predisposition to violence, scientists have attempted to speculate on a biological explanation for this behavior. Some scientists have considered a direct relationship between the likelihood a person will commit a violent crime and the level of serotonin, an organic compound believed to play an integral role in the regulation of mood, sleep, and appetite, present in the brain. In the central nervous system, serotonin is part of the biochemistry that is related to several psychological conditions; depression, migraines, bipolar disorder, and anxiety are all linked to an overproduction or underproduction of the compound. If violent behavior could be clinically linked to an imbalance in brain chemicals, then scientists would be able to control aggressive tendencies through medication before the behavior escalates.

The scientific research to find the biological cause of violent behavior aims to _____.

- ① increase the ability of society to recognize potential threats
- ② understand how the brain chemistry reacts to artificial drugs
- ③ conceive efficacious remedies to alleviate offensive dispositions
- ④ help scientists augment the rates of violent crimes occurring
